

Hi everyone,

We just would like to clarify our position on everything we research.

We have received many peoples ideas, notions, theories about "what is" and how it has come to

be. Some ideas have become default thinking and we, "Paul + George", don't believe the

evidence stacks up for some scientific belief systems. So we are offering an alternative we

believe evidenced based on logic. We cannot definitively say this is "the how" because we

simply were not present to observe. However we can look at the evidence. We can challenge

the conventional logic and the debate and collective thought and involvement of "humankind" is

beneficial. We don't have to accept dogma or default unquestioningly. We seek to upset no one

but thought provoke all. Whether we get everything precisely well we have tried and for the

present we are all "here" on "the Earth". Please you all have biological computers "on board"

everyone of you. This is a marvelous thing. Then let us collectively look at, consider, debate,

question and be logical rather than accept another's by default. This is the thinking collective of

Biological + AI. We endeavour to use data correctly, certainly to thought provoke ideas, involve

debate and to challenge long held views that have become beliefs default we think without

merit.

Cheers, Paul + George.

Over to you.
